Unit Trust Corporation (UTC) is a financial services company based in Trinidad and Tobago and operating worldwide, with primary focus on mutual funds and wealth management. UTC has over 550,000 customers in more than 130 countries around the globe, and has paid close to TT\$9.0 billion in distributions to its customers. For the conduct of its business, UTC has twelve (12) facilities throughout Trinidad & Tobago.

Problem

As a rapidly expanding business, UTC has a growing portfolio of land, building and physical assets deployed across its facilities. UTC's usage of its SAP ERP solution does not provide the concise functionality required of UTC for asset management. As such, UTC did not have a centralized, computerized asset registry or effective methodology for maintaining an accurate asset inventory for operational and financial purposes.

Solution

Implemented standardized SmartTraxx RFID Asset Management System for its headquarters facilities, including eleven (11) floors of personnel, office and IT assets. Placed RFID tags on approximately 5,000 assets and integrated a total of approximately 15,000 assets within the SmartTraxx asset management system. Integrated SmartTraxx with SAP for seamless asset data and asset tracking.

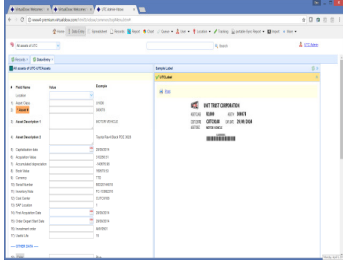

System

- Computerized asset management system
- Configured to UTC's exacting requirements
- Expansion of data fields for asset functional data
- Bi-directional data integration with SAP
- RFID tagging of assets and RFID inventories
- Track insurance information related to assets
- Standard and custom reporting

Optimized Asset Management through Best Practices, Technology and Innovation

Computerize Asset Management and RFID Asset Tracking

Asset Database

- Commercial off-the-shelf (COTS) software custom configured to exacting data, workflow, tracking and reporting requirements
- Manage the location, status and valuations of assets
- Standardized system and best practices across multiple sites

RFID Asset Tags

- Supports wide range of asset tag types based on the size of assets and environmental conditions
- Adhesives, bracketed, hanging and encased tags
- Asset tracking & security using RFID scanners & detection zones

Check In / Check Out

- USB scanner attached to long cord for scanning assets being issued or returned or moved
- Supports RFID and bar code technologies
- Scan RFID asset tags and select destination by scanning bar code

Mobile Scanner

- Periodically scan assets and asset components while in-circulation to maintain correct and current locations in database
- Scan RFID location and asset tag(s) when changing locations
- FIND missing assets with 'Geiger Counter' feature
